IN THE CLAIMS

Please add Claims 12-17, and cancel Claims 1, 2, 4, and 9-11, without prejudice or disclaimer of subject matter.

1-11. (Canceled)

12. (New) A method comprising the steps of:

identifying, via a host computer, a non-currency-based account of a first party, the non-currency-based account being associated with a non-currency-based program;

providing a smart card to the first party, the smart card being associated with the non-currency-based account of the first party and having information stored thereon:

associating a personal identification password with the smart card;

receiving a transaction authorization request from a second party associated with a merchant, where the transaction authorization request includes a transaction number generated and associated with the transaction authorization request by, at least:

displaying a secondary transaction number icon on a transaction

launching a secondary transaction number application by selecting

the icon:

interface system;

interfacing the smart card with the transaction interface system and receiving the a personal identification password from the first party;

generating, by at least one of a remote server and the smart card, a transaction number based, at least in part, on the information stored on the smart card;

 $transmitting, \ by \ the \ at \ least \ one \ the \ remote \ server \ and \ the \ smart \ card,$ the transaction number to the second party; and

 $\label{eq:cond_party} auto-filling, by the second party, the transaction number into the transaction authorization request;$

identifying, via the host computer, the non-currency-based account of the first party based, at least in part, on the transaction number;

converting accumulated non-currency-based value in the non-currency-based account into a corresponding cash equivalent;

determining that the corresponding cash equivalent is not less than a transaction amount, the transaction amount being at least a portion of a price associated with the at least one of a good and a service; and

 $\label{eq:cond_party} returning an approval message from the host computer to the second party if \\$ the transaction authorization request is authorized.

- 13. (New) The method of Claim 1, further comprising designating limited-use parameters and associating the parameters with the transaction number.
 - (New) The method of Claim 1, further comprising:
 capturing transaction settlement information in a financial capture system;

creating an accounts payable file and routing the accounts payable file to an accounts payable system for payment processing:

forwarding the transaction settlement information to an accounts receivable system;

recognizing that the transaction settlement information comprises a transaction

number generated in conjunction with at least one secondary transaction number application; and

issuing a credit from the non-currency-based account to the accounts receivable

system, wherein the credit from the non-currency-based account offsets at least part of the transaction amount.

15. (New) A computer readable storage medium having stored thereon a plurality of instructions, said plurality of instructions when executed by one or more processors, cause said one or more processors to perform:

identifying, via a host computer, a non-currency-based account of a first party, the non-currency-based account being associated with a non-currency-based program;

providing a smart card to the first party, the smart card being associated with the non-currency-based account of the first party and having information stored thereon;

associating a personal identification password with the smart card;

receiving a transaction authorization request from a second party associated with a merchant, where the transaction authorization request includes a transaction number generated and associated with the transaction authorization request by, at least:

displaying a secondary transaction number icon on a transaction interface system;

launching a secondary transaction number application by selecting

interfacing the smart card with the transaction interface system and receiving the a personal identification password from the first party;

generating, by at least one of a remote server and the smart card, a transaction number based, at least in part, on the information stored on the smart card; transmitting, by the at least one the remote server and the smart card,

the transaction number to the second party; and

the icon:

 $\label{eq:auto-filling} auto-filling, by the second party, the transaction number into the transaction authorization request;$

identifying, via the host computer, the non-currency-based account of the first party based, at least in part, on the transaction number;

converting accumulated non-currency-based value in the non-currency-based account into a corresponding cash equivalent;

determining that the corresponding cash equivalent is not less than a transaction amount, the transaction amount being at least a portion of a price associated with the at least one of a good and a service; and

 $\label{eq:condition} returning \ an \ approval \ message \ from \ the \ host \ computer \ to \ the \ second \ party \ if$ the transaction authorization request is authorized.

- 16. (New) The computer readable storage medium of Claim 15 further comprising instructions which when executed by one or more processors, cause said one or more processors to perform designating limited-use parameters and associating the parameters with the transaction number.
- 17. (New) The computer readable storage medium of Claim 15 further comprising instructions which when executed by one or more processors, cause said one or more processors to perform:

capturing transaction settlement information in a financial capture system;

creating an accounts payable file and routing the accounts payable file to an accounts payable system for payment processing;

recognizing that the transaction settlement information comprises a transaction number generated in conjunction with at least one secondary transaction number application; and issuing a credit from the non-currency-based account to the accounts receivable system, wherein the credit from the non-currency-based account offsets at least part of the

transaction amount.

forwarding the transaction settlement information to an accounts receivable system;
